

MIND YOUR BUSINESS

Precast construction is a perfect fit for any business.

IT'S A PRETTY GOOD BET THAT IF YOUR BUSINESS is succeeding, you're on course to expand...no matter what business you're in. The need for growth is universal, but the physical requirements of a new business facility are almost always unique to the organization. Fortunately, precast construction is as accommodating as it is versatile. The broad sweeping benefits of the product and the construction process are attractive to virtually any industry.

For retailers, precast is a natural. The predictable, repeatable process enables your organization to build the same building with the same plans and similar costs regardless if you're adding a new building on the other side of town or the other side of North America.

Warehouses and distribution centers are engineered to house and move mountains of merchandise. Precast panels make massive rows of docks doors and tall racking systems a piece of cake. And, because you can customize the R-values of a precast panel, you can seamlessly adjust thermal performance for storage, cool storage and office areas.

Schools and universities have come to appreciate precast construction for its sheer speed. When adding on an auditorium, gymnasium or an ice arena it's possible to break ground near Memorial Day and have additions ready for use by Labor Day.

Data centers have become an increasingly important segment. The load-bearing aspect of precast panels can support the massive rooftop mechanicals needed for a data center and R-values of up to R-28 can help regulate the delicate temperature requirements.

Building a corporate headquarters? Precast construction not only gives you a world of exterior finishes and aesthetic options, it delivers sustainability. For organizations with a green agenda, precast panels offer the performance and a process well suited for LEED certification. A precast building uses less steel, reduces energy consumption and even makes use of a significant amount of recycled content.

The fact is, there are few business segments we haven't catered to in our 45 year history. So no matter what business you're in, a better understanding of precast is a good idea. Visit FabconMeansBusiness.com and see for yourself.
