

INTERIOR FINISH OPTIONS

Interior finishes

A major advantage to Fabcon's casting process is to provide the exterior finish of the wall on the top face of the casting process. This result in a steel form interior finish which with little preparation can be painted or otherwise finished direct. The surface is more reflective and cleaner than typical "broom" interior finishes.

If the project design calls for a steel form flat exterior finish then the interior finish becomes the top face in the casting process. In this case there is a choice of a broom finish or a troweled surface.
